

Standard Life Vanguard Emerging Market Stock Index Fund

The Standard Life Vanguard Emerging Market Stock Index Fund invests fully in the Vanguard Emerging Markets Stock Index Fund.

It seeks to generate long-term capital growth by tracking the performance of the MSCI Emerging Markets Index. This is an index comprised of companies in emerging markets in Europe, Asia, Africa, Latin America and Russia.

It aims to track the MSCI Emerging Markets Index by holding a portfolio of all or similar securities held in the index itself.

Income received by the fund will be reinvested and reflected in the unit price of the fund.

Why the Standard Life Vanguard Emerging Market Stock Index Fund?

1. Access to some of the fastest growing regions in the world

The emerging market story is one that is fundamentally driven by young and growing populations, durable consumer spending and a growing middle class¹ – providing the potential for strong GDP growth over the coming years.

2. Improving economies

Economies within the region are improving as a result of prudent fiscal and monetary policies adopted by emerging market governments¹.

3. Leading global growth

Emerging economies are expected to grow at double the rate of developed economies over the next few years².

4. Low-cost

A low-cost alternative to an actively managed emerging market equity fund.

5. Diversify your exposure

Provides investors with an equity portfolio that is diversified across companies, industries and emerging market regions.

Warning: If you invest in this fund you may lose some or all of the money you invest

Warning: This investment may be affected by changes in currency exchange rates

Warning: The value of your investment may go down as well as up

Who is the fund suitable for?

Consider this fund if you

- are comfortable with a high level of risk. This fund is rated six out of seven on the ESMA risk scale, seven being the highest
- have an investment horizon of at least five years
- can take risk with your capital
- are seeking the potential for investment returns that are similar to the underlying index that the fund tracks

This fund may not be suitable if you

- do not want to take any risk with your capital
- have an investment horizon of less than five years
- are not prepared to accept periods of losses due to the very volatile nature of emerging market equities

Important things to consider

The Standard Life Vanguard Emerging Market Stock Index Fund invests in the Vanguard Emerging Market Stock Index Fund.

Investment risk is concentrated in specific sectors, countries, currencies or companies. This means the fund is more sensitive to any localised economic, market, political or regulatory events.

Investors in the fund may buy and sell units on any normal business day.

The value of investments within the fund can fall as well as rise and is not guaranteed – an investor may get back less than they paid in. The Fund and its holdings may use derivatives for the purpose of efficient portfolio management, reduction of risk or to meet its respective investment objective if this is permitted and appropriate. The euro value of overseas assets held in the Fund may rise and fall as a result of exchange rate fluctuations.

At certain times and when you cash in your policy, there is likely to be tax payable. This will depend on the policy type you're invested in and your personal circumstances.

Equities

The fund invests in equities and equity related securities. These are sensitive to variations in the stock market which can be volatile and change substantially in short periods of time.

Currency risk

Movements in currency exchange rates can adversely affect the return of your investment.

Counterparty risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the fund to financial loss.

Liquidity risk

Liquidity risk occurs when the relevant market is inefficient and it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price.

Index tracking risk

The fund is not expected to track the performance of the Index at all times with perfect accuracy. The fund is, however, expected to provide investment results that, before expenses, generally correspond to the price and yield performance of the Index.

Index sampling risk

As the fund uses an index sampling technique whereby a representative sample of securities are selected to represent the Index, there is the risk that the securities selected for the fund may not, in the aggregate, approximate the full Index.

Use of derivatives

The fund can use derivatives in order to meet its investment objective or to protect from price and currency movements. This may result in gains or losses that are greater than the original amount invested. Derivatives are financial instruments which derive their value from an underlying asset, such as a company share or a bond, and are used routinely in global financial markets. Used correctly, derivatives offer an effective and cost-efficient way of investing in financial markets. However, derivatives can lead to increased volatility of returns in a fund, thus requiring a robust and extensive risk management process. Some derivatives give rise to increased potential for loss where the fund's counterparty defaults in meeting its payment obligations.

Securities lending

The assets in this fund may be used for the purpose of security lending in order to earn an additional level of return and offset the cost of the fund. While securities lending increases the level of risk in the fund it may provide an opportunity to increase the investment return.

Switching your fund, transferring or cashing in

You may be one of many investors in a fund. Sometimes, in exceptional circumstances:

- we may also change the pricing basis of a fund to reflect cash flows in and out. If it's a property based fund, due to the high transaction charges associated with the assets, this can result in a significant movement of the fund price.
- we may also wait before we carry out your request to switch funds, transfer or cash in your policy. This delay could be up to a month. But for some funds this may be longer, for example, if it's a property based fund, it may be up to 12 months because property and land can take longer to sell.

If we have to delay switching, transferring or cashing in, we'll use the fund prices on the day the transactions take place - these prices could be very different from the prices on the day that you made the request.

These are processes which aim to maintain fairness between those remaining invested and those leaving a fund.
