

Standard Life Vanguard Eurozone Stock Index Fund

The Standard Life Vanguard Eurozone Stock Index Fund invests fully in the Vanguard Eurozone Stock Index Fund.

It seeks to generate long-term capital growth by tracking the performance (up and down) of the MSCI EMU Index, capturing large and mid-cap representation across the 10 developed market countries in the EMU*. It aims to track the MSCI EMU Index by holding a portfolio of all or similar securities held in the index itself.

Income received by the fund will be reinvested and reflected in the unit price of the fund.

Why consider the Standard Life Vanguard Eurozone Stock Index Fund?

1. Access to the some of the world's most successful companies

Investing in Europe provides access to some of the world's most profitable and successful companies, many with a global reach. Many of these companies and brands you may be familiar with including Siemens, Allianz and Unilever.

2. Diversify your economic exposure

Not all developed countries grow at the same speed, with some enjoying faster growth rates than others. Investing in a diversified Eurozone equity portfolio can provide attractive investment opportunities while adding to portfolio diversification.

3. No currency exchange risk

As the fund invests in euro-denominated securities, currency exchange risk is eliminated for the euro investor.

4. Low-cost

A low-cost alternative to an actively managed Eurozone equity fund.

5. Experienced fund manager

Managed by Vanguard, one of the world's largest fund managers with over 40 years of experience in passive investing.

*Developed market countries in the EMU include: Austria, Belgium, Finland, France, Germany, Ireland, Italy, the Netherlands, Portugal and Spain

Warning: If you invest in this fund you may lose some or all of the money you invest

Warning: The value of your investment may go down as well as up

Who is the fund suitable for?

Consider this fund if you

- are comfortable with a high level of risk. This fund is rated six out of seven on the ESMA risk scale, seven being the highest
- are seeking the potential for long-term investment returns that are similar to the performance of the underlying index that the fund tracks
- have an investment horizon of at least five years
- can take risk with your capital

This fund may not be suitable if you

- are a low/medium risk investor
- do not want to take risk with your capital
- have an investment horizon of less than five years
- are not prepared to accept periods of losses due to the volatile nature of equity markets

Why Vanguard?

Vanguard is the second largest asset manager in the world with over €4 trillion² in assets under management and more than 20 million investors around the globe³. Vanguard established the world's first index mutual fund for individual investors in 1976 and has been a leader in low-cost index investing ever since⁴. They also launched the first funds based on bond and international indices.

Important things to consider

The Standard Life Vanguard Eurozone Stock Index Fund invests in the Vanguard Eurozone Stock Index Fund.

Investment risk is concentrated in specific sectors, countries, currencies or companies. This means the fund is more sensitive to any localised economic, market, political or regulatory events.

Investors in the fund may buy and sell units on any normal business day.

The value of investments within the Standard Life Vanguard Eurozone Stock Index Fund can fall as well as rise and is not guaranteed – an investor may get back less than they paid in. The fund and its holdings may use derivatives for the purpose of efficient portfolio management, reduction of risk or to meet its respective investment objective if this is permitted and appropriate.

At certain times and when you cash in your policy, there is likely to be tax payable. This will depend on the policy type you're invested in and your personal circumstances.

Risk Factors

Equities

The fund invests in equities and equity related securities. These are sensitive to variations in the stock market which can be volatile and change substantially in short periods of time.

Counterparty risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the fund to financial loss.

Liquidity risk

Liquidity risk occurs when the relevant market is inefficient and it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price.

Index tracking risk

The fund is not expected to track the performance of the Index at all times with perfect accuracy. The fund is, however, expected to provide investment results that, before expenses, generally correspond to the price and yield performance of the Index.

Index sampling risk

As the fund uses an index sampling technique whereby a representative sample of securities are selected to represent the Index, there is the risk that the securities selected for the fund may not, in the aggregate, approximate the full Index.

Use of derivatives

The fund can use derivatives in order to meet its investment objective or to protect from price and currency movements. This may result in gains or losses that are greater than the original amount invested. Derivatives are financial instruments which derive their value from an underlying asset, such as a company share or a bond, and are used routinely in global financial markets. Used correctly, derivatives offer an effective and cost-efficient way of investing in financial markets. However, derivatives can lead to increased volatility of returns in a fund, thus requiring a robust and extensive risk management process. Some derivatives give rise to increased potential for loss where the fund's counterparty defaults in meeting its payment obligations.

Securities lending

The assets in this fund may be used for the purpose of security lending in order to earn an additional level of return and offset the cost of the fund. While securities lending increases the level of risk in the fund it may provide an opportunity to increase the investment return.

Switching your fund, transferring or cashing in

You may be one of many investors in a fund. Sometimes, in exceptional circumstances:

- we may also change the pricing basis of a fund to reflect cash flows in and out. If it's a property based fund, due to the high transaction charges associated with the assets, this can result in a significant movement of the fund price.
- we may also wait before we carry out your request to switch funds, transfer or cash in your policy. This delay could be up to a month. But for some funds this may be longer, for example, if it's a property based fund, it may be up to 12 months because property and land can take longer to sell.

If we have to delay switching, transferring or cashing in, we'll use the fund prices on the day the transactions take place – these prices could be very different from the prices on the day that you made the request.

These are processes which aim to maintain fairness between those remaining invested and those leaving a fund.
