Source: FE Analytics, performance at 30 April 2023 (01 May 2023 for Vanguard Index Tracking Funds and Global Index Funds). Gross of Annual Management Charge (AMC). For an explanation of volatility ratings, see overleaf.

*The Standard Life Global Index Funds launched in August 2021. We use the 5-year annualised volatility of each of the underlying Vanguard Funds (in which the Global Index Funds invest) to determine the ESMA risk rating for each Global Index Fund. The underlying funds in which the Global Index Funds invest are: the Vanguard Global Stock Index Institutional EUR (ISIN IE00B03HD191), the Vanguard Emerging Markets Stock Index Institutional EUR (ISIN IE0031786696) and the Vanguard Global Bond Index Institutional Plus Hedged Acc EUR (ISIN IE00BGCZ0B53).

** The Dynamic Multi-Asset Growth fund closed on April 21 2023

*** You can only switch out of this fund (closed to new investments and switches in).

The value of investments within these funds will go down as well as up and may also be affected by changes in currency exchange rates. The information shown relates to the past. Past performance is not a guide to the future.

Visit www.brokerzone.ie/fundcentre for factsheets, performance charting tool and more information.

Max drawdown - The max drawdown is based on monthly data (fund prices on first business day of each month). It calculates the maximum loss an investor would have experienced from its highest point to its subsequent lowest point, using monthly data. Source: abrdn

Volatility % - Investing in any fund runs a risk of losing money. Some funds are riskier than others. Looking at the volatility of the fund is the way to measure the risk involved. In this document volatility has been calculated as the annualised standard deviation of the fund's monthly returns. High volatility means that a fund is more likely to suddenly fall or rise in value than a fund with lower volatility. These amounts are also more likely to be more significant.

The max drawdown and volatility % figures only include funds with a since launch period greater than one year.

Volatility rating - Indicates how much the fund price might move compared to other funds. The higher the volatility rating, the less stable the fund price is likely to be. You can use this to help you choose between funds with different volatility ratings.

The volatility ratings of our funds are calculated using the European Security and Markets Authority (ESMA) guidelines, which use a seven point scale to rate funds based on their five year annualised volatilities.

Higher volatility ratings typically mean greater potential investment returns over the longer term. But high volatility funds can suddenly fall or rise in value.

Volatility ratings are regularly reviewed and may change over time.
