

# Standard Life Global Index Funds

**Standard Life**

There's a lot to look forward to

We understand that investing for your life savings can be difficult. With so many funds to choose from it's hard to pick the right ones for you. Our Standard Life Global Index Funds aim to make investing easier.

You have a choice of five simple, ready-made, multi-asset portfolios. The underlying investments are managed by Vanguard, one of the worlds' largest fund managers. They are passive funds which aim to replicate or track the performance of a stock market or bond index.

The five ready-made portfolios offer different combinations of company shares and investment grade bonds (both government and corporate), allowing you to choose a fund that's appropriate to your attitude to risk.

They use simple, index tracking funds as the underlying components and provide significant levels of diversification at a low cost. The funds are regularly rebalanced so that the level of equities and bonds that you choose remain consistent, providing you with confidence and certainty into the future.

# Why choose these funds?

## Diversification

Each fund invests in Vanguard's index funds, giving you access to thousands of international stocks and bonds, across all major global regions and industries.

## Simple and easy to understand

Each fund only invests in a combination of equities and bonds, so no complex investment instruments to consider.

## Easy access

These funds are priced daily. If your circumstances change, it's easy to switch between the five Global Index Funds or any of Standard Life's funds that are available under your product.

## Investment mix

Each fund is managed to maintain its specific asset allocation, rebalanced to make sure they don't drift out of line from their target mix of equities and bonds. This means you can rest assured that the mix between equities and bonds will be consistent in the future.

## Low costs

Using Vanguard's low-cost index funds as building blocks means that the funds deliver a diversified all-in-one portfolio at a relatively low cost. Each of the five funds have an annual management charge of 0.95%.

**Warning: If you invest in these funds you may lose some or all of the money you invest.**

**Warning: This investment may be affected by changes in currency exchange rates.**

**Warning: The value of your investment may go down as well as up.**

# Global Index Fund range

This range of portfolios has different levels of potential risk and return. Each fund offers a diversified blend of equities and bonds, built using Vanguard's underlying index funds. For example, as at June 2021 The Global Index Fund 60 offers exposure to more than 60 countries, 12 equity sectors and high-quality corporate and government bonds ranging from AAA to <BBB, all within more than 16,200 unique holdings across equities and fixed income. They provide professionally constructed and diversified portfolios designed to help you meet your financial goals, whatever your attitude to risk.

## Standard Life Global Index Fund 20

This fund will invest approximately 20% in global equities (including emerging markets) and approximately 80% in global government and corporate bonds.

## Standard Life Global Index Fund 40

This fund will invest approximately 40% in global equities (including emerging markets) and approximately 60% in global government and corporate bonds.

## Standard Life Global Index Fund 60

This fund will invest approximately 60% in global equities (including emerging markets) and approximately 40% in global government and corporate bonds.

## Standard Life Global Index Fund 80

This fund will invest approximately 80% in global equities (including emerging markets) and approximately 20% in global government and corporate bonds.

## Standard Life Global Index Fund 100

This fund will invest all of the investments in a combination of global and emerging equities.

■ Equities  
■ Bonds

The graph below illustrates the more risk you are willing to take, moving from Global Index Fund 20 to Global Index Fund 100, the greater the potential reward you may achieve over time. However, there is also the potential for greater losses.

# Vanguard

## World leader in passive investing

Vanguard is the second largest asset manager in the world with just under €5.2 trillion in assets under management and more than 30 million investors around the globe\*. They established the world's first index mutual fund for individual investors in 1976 and has been a leader in low-cost index investing ever since.

\*At July 2021

## Investment choice

As well as the range of Global Index Funds, there is a comprehensive range of other funds to choose from. Please speak to your financial adviser for more details.

## Staying up to date

For the latest information on our Global Index Funds, visit our Fund Centre on [www.standardlife.ie/funds](http://www.standardlife.ie/funds). This keeps you in the loop on what you need to know, from the latest asset allocation to the most up to date fund price and performance.

# Are these funds right for me?

We want to make sure that you only invest in funds that are right for you. So how will you know if the Standard Life Global Index Fund is the right choice for your life savings? Take a look at the statements below. If they relate to you then this could be the right fund for you. Your financial adviser should help you make this decision.

## **These funds may be suitable if you:**

- are seeking a fund solution that is tailored to closely match your attitude to risk
- have an investment horizon of at least five years
- can take risk with your capital

## **These funds may not be suitable if you:**

- do not want to take risk with your capital
- are investing for less than five years
- are not prepared to accept periods of losses due to the volatile nature of equity and bond markets

## **Is Environmental, Social or Governance (ESG) integrated into the investment process?**

These are passively managed funds and aim to track the performance of a number of specified indexes, by holding a portfolio of all or similar securities held in the indexes themselves. The underlying indexes that these funds track are not ESG aligned indexes and do not incorporate ESG criteria when considering companies/securities for inclusion in the indexes themselves.

As such these funds do not incorporate ESG considerations into the investment strategy, nor are there any specific ESG screens applied for investments to be eligible for inclusion in the funds.

Furthermore, investments within these funds do not take into account the EU Taxonomy criteria for environmentally sustainable economic activities.

Standard Life International and the fund managers of the underlying funds believe that active stewardship helps to create long-term value for investors. We believe that being an engaged shareholder and speaking directly with the companies the funds invest in on ESG matters, is essential to the health of the company, driving the potential for sustainable investment returns.

# How do I know my attitude to risk?

To know what the right investment choice is for you, you need to consider your personal circumstances and know what level of risk you're comfortable with. In conjunction with Oxford Risk Research and Analysis (ORRA), we've developed a Risk Questionnaire to help you understand what your attitude to risk is. Your financial adviser can take you through this Risk Questionnaire, or go to [standardlife.ie/risk-questionnaire](https://standardlife.ie/risk-questionnaire) and complete it online.

## Important things to consider

All investment involves risk. These funds offer no guarantee against loss or that the Fund's objective will be attained. This is not a guaranteed or capital protected product. There are risks to your capital should you choose to invest in these funds.

Investment risk is concentrated in specific sectors, countries, currencies, or companies. This means the funds are more sensitive to any localised economic, market, political, or regulatory events.

Investors in these funds may buy and sell units on any normal business day.

The value of bonds and fixed income related securities is affected by influential factors such as interest rates, inflation, credit spreads and volatility which, in turn, are driven by other factors including political, economic news, company earnings and significant corporate events. Movements in currency exchange rates can adversely affect the return of your investment.

While the bond allocation in these funds invest predominantly in investment grade bonds there is always a risk that the bond issuers may not be able to pay the income as promised or could fail to repay the capital amount used to purchase the bond. Where a bond market has a low number of buyers and/or sellers, it can be hard to sell particular bonds at an anticipated price and/or in a timely manner.

The value of investments within the funds can fall as well as rise and is not guaranteed – an investor may get back less than they paid in.

The euro value of overseas assets held in the funds may rise and fall as a result of exchange rate fluctuations.

In extreme market conditions, some securities may become hard to value or sell at a desired price. This could affect these Fund's ability to meet redemptions in a timely manner.

The funds could lose money as a result of the failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

These funds may invest in China A shares and in other emerging market equities and bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.

Investing in China A shares involves special considerations and risks, including greater price volatility, a less developed regulatory and legal framework, exchange rate risks/controls, settlement, tax, quota, liquidity and regulatory risks.

**At certain times and when you cash in your policy, there is likely to be tax payable. This will depend on the policy type you're invested in and your personal circumstances.**

### Risk Factors

The funds invest in equities and equity related securities. These are sensitive to variations in the stock market which can be volatile and change substantially in short periods of time.

### Currency risk

Movements in currency exchange rates can adversely impact the return of your investment. Currency hedging may be used but is not guaranteed to completely eliminate currency risk.

### Counterparty risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments may expose the fund to financial loss.

### Inflation Risk

The value of your investments may not be worth as much in the future due to changes in purchasing power resulting from inflation.

### Credit risk

The issuer of a financial asset held within the funds may not pay income or repay capital to the funds when due.

### Liquidity Risk

Liquidity risk occurs when the relevant market is inefficient, and it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price.

### Index Tracking risk

The funds are not expected to track the performance of the underlying indices at all times with perfect accuracy. The funds are, however, expected to provide investment results that, before expenses, generally correspond to the price and yield performance of the indices.

### Index sampling risk

As these funds use an index sampling technique whereby a representative sample of securities are selected to represent an index, there is the risk that the securities selected for the funds may not, in the aggregate, approximate the full index.

### Use of derivatives

These funds may use investment techniques (including Derivatives) to seek to protect and enhance the value of the funds and to manage the funds risks. Derivatives, such as futures, options and swaps, are linked to the rise and fall of other assets. In other words, they "derive" their price from another asset. They can generate returns when share prices and/or indices fall.

Investing in derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the funds being leveraged (where economic exposure and thus the potential for loss by the funds exceed the amount they have invested) and in these market conditions the effect of leverage will be to magnify losses.

These funds do not make extensive use of derivatives.

### Securities Lending

The assets in these funds may be used for the purpose of security lending in order to earn an additional level of return and offset the cost of the funds. While securities lending increases the level of risk in the funds it may provide an opportunity to increase the investment return.

### **Switching your funds, transferring or cashing in**

You may be one of many investors in a fund. Sometimes in exceptional circumstances:

- We may also change the pricing basis of a fund to reflect cash flows in and out. If it's a property based fund, due to the high transaction charges associated with the assets, this can result in a significant movement of the fund price
- We may also wait before we carry out your request to switch your funds, transfer or cash in your policy. This delay could be up to a month. But for some funds, the delay could be longer, for example, if it's a property based fund, it may be up to 12 months because property and land can take longer to sell

If we have to delay switching, transferring or cashing in, we'll use the fund prices on the day the transaction takes place – these prices could be very different from the prices on the day you made the request.

These are processes which aim to maintain fairness between those remaining invested and those leaving a fund.
