

The fund invests in the Standard Life Investments UK Smaller Companies Fund which aims to provide long term growth by investing mainly in the shares of smaller companies listed on the UK stock market. The fund is actively managed by our investment team, who will select stocks to try to take advantage of opportunities they have identified.

The value of investments within the fund can fall as well as rise and is not guaranteed - you may get back less than you pay in. The Fund and its holdings may use derivatives for the purpose of efficient portfolio management, reduction of risk or to meet its respective investment objective if this is permitted and appropriate. The euro value of overseas assets held in the fund may rise and fall as a result of exchange rate fluctuations.

Warning: Past performance is not a reliable guide to future performance
Warning: The value of this investment may go down as well as up
Warning: This investment may be affected by changes in currency exchange rates
Warning: If you invest in this fund you may lose some or all of the money you invest

Definition:

S/L - (Since Launch)

Cash - may include bank and building society deposits, other money market instruments such as Certificates of Deposits (CDs), Floating Rate Notes (FRNs) including Asset Backed Securities (ABSs), Money Market Funds and allowances for tax, dividends and interest due if appropriate.

Volatility rating - Indicates how much the fund price might move compared to other funds. The higher the volatility rating, the less stable the fund price is likely to be. You can use this to help you choose between funds with different volatility ratings. The volatility ratings of our funds are calculated using the European Security and Markets Authority (ESMA) guidelines, which use a seven point scale to rate funds based on their five year annualised volatilities. Higher volatility ratings typically mean greater potential investment returns over the longer term. But high volatility funds can suddenly fall or rise in value. Volatility ratings are regularly reviewed and may change over time.

Key Risks

Below we document the specific or heightened risks applicable to this fund rather than an exhaustive list.

Equities Risk - The fund invests in equities and equity related securities. These are sensitive to variations in the stock market which can be volatile and change substantially in short periods of time.

Currency risk - Movements in currency exchange rates can adversely affect the return of your investment.

Counterparty risk - The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the fund to financial loss.

Liquidity risk - Liquidity risk occurs when the relevant market is inefficient and it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price.

Smaller Companies - The shares of smaller companies may be less liquid and more volatile than those of larger companies.

A concentrated portfolio may be more volatile and less liquid than a more broadly diversified one. The funds investments are concentrated in a particular region, country or sector.

Key Risks

Use of Derivatives - The fund can use derivatives in order to meet its investment objective or to protect from price and currency movements. This may result in gains or losses that are greater than the original amount invested. Derivatives are financial instruments which derive their value from an underlying asset, such as a company share or a bond, and are used routinely in global financial markets. Used correctly, derivatives offer an effective and cost-efficient way of investing in financial markets. However, derivatives can lead to increased volatility of returns in a fund, thus requiring a robust and extensive risk management process. Some derivatives give rise to increased potential for loss where the fund's counterparty defaults in meeting its payment obligations.

Securities lending - The assets in this fund may be used for the purpose of securities lending in order to earn an additional level of return and offset the cost of the fund. While securities lending increases the level of risk in the fund it may provide an opportunity to increase the investment return.

How ESG is integrated into the investment strategy of the fund

The Fund is classified as Article 6 under the EU's Sustainable Finance Disclosure Regulation ("SFDR"). Article 6 funds don't promote ESG characteristics or have a specific sustainable investment objective. This fund is managed using an investment process that integrates environmental, social and governance ("ESG") factors but does not promote ESG characteristics or have specific sustainable investment objectives. This means that whilst ESG factors and risks are considered, they may or may not impact portfolio construction.

Furthermore, investments within this Fund do not take into account the EU Taxonomy criteria for environmentally sustainable economic activities.

abrln, the Investment Manager of the fund, integrates sustainability risks and opportunities into its research, analysis and investment decision-making process. abrln believes that the consideration of sustainability risks and opportunities of a company can have a material impact on a company's competitive position and future success and as such on long-term investment returns for investors. abrln's ESG integration requires, in addition to its inclusion in the investment decision making process, appropriate monitoring of sustainability considerations in risk management, portfolio monitoring, engagement and stewardship activities. abrln also engages with policymakers on ESG and stewardship matters. Combining the integration of sustainability risks and opportunities with broader monitoring and engagement activities may affect the value of investments and therefore returns. Further information on abrln's ESG integration approaches by asset classes can be found at <https://www.abrln.com/europe/sustainable-investing> under "Sustainable Investing".

Important information: Applying ESG and sustainability criteria in the investment process may result in the exclusion of securities in which the Fund might otherwise invest. Such securities could be part of the benchmark against which the Fund is managed, or be within the universe of potential investments. This may have a positive or negative impact on performance and may mean that the Fund's performance profile differs to that of funds which are managed against the same benchmark or invest in a similar universe of potential investments but without applying ESG or sustainability criteria. Furthermore, the lack of common or harmonised definitions and labels regarding ESG and sustainability criteria may result in different approaches by managers when integrating ESG and sustainability criteria into investment decisions. This means that it may be difficult to compare funds with ostensibly similar objectives and that these funds will employ different security selection and exclusion criteria. Consequently, the performance profile of otherwise similar funds may deviate more substantially than might otherwise be expected. Additionally, in the absence of common or harmonised definitions and labels, a degree of subjectivity is required and this will mean that a fund may invest in a security that another manager or an investor would not.
