

The fund aims to provide income and capital growth by investing predominantly in UK real commercial property, selected from across the retail, office, industrial and other sectors. The fund is actively managed and will typically invest in a mix of freehold and leasehold properties. The fund may also invest in other property related assets including shares, bonds and other property funds. The fund may also invest in cash, short term government bonds as well as gilts. Typically at least 95% of the non euro assets will be hedged back to euro. Selling property can be a lengthy process so investors in the fund should be aware that they may not be able to sell their investment when they want to.

The value of investments within the fund can fall as well as rise and is not guaranteed - you may get back less than you pay in. The Fund and its holdings may use derivatives for the purpose of efficient portfolio management, reduction of risk or to meet its respective investment objective if this is permitted and appropriate. The euro value of overseas assets held in the fund may rise and fall as a result of exchange rate fluctuations.

Warning: Past performance is not a reliable guide to future performance
Warning: The value of this investment may go down as well as up
Warning: This investment may be affected by changes in currency exchange rates
Warning: If you invest in this fund you may lose some or all of the money you invest

Definition:

S/L - (Since Launch)

Cash and Other - may include bank and building society deposits, other money market instruments such as Certificates of Deposits (CDs), Floating Rate Notes (FRNs) including Asset Backed Securities (ABSs), Money Market Funds and allowances for tax, dividends and interest due if appropriate.

Volatility rating - Indicates how much the fund price might move compared to other funds. The higher the volatility rating, the less stable the fund price is likely to be. You can use this to help you choose between funds with different volatility ratings. The volatility ratings of our funds are calculated using the European Security and Markets Authority (ESMA) guidelines, which use a seven point scale to rate funds based on their five year annualised volatilities. Higher volatility ratings typically mean greater potential investment returns over the longer term. But high volatility funds can suddenly fall or rise in value. Volatility ratings are regularly reviewed and may change over time.

Key Risks

Below we document the specific or heightened risks applicable to this fund rather than an exhaustive list.

The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses. The fund does not make extensive use of derivatives.

Commercial property is less liquid than other asset classes such as bonds or equities. Selling property can be a lengthy process so investors in the fund should be aware that they may not be able to sell their investment when they want to.

Commercial property transaction charges are higher than those which apply in other asset classes. Investors should be aware that a high volume of transactions would have a material impact on fund returns.

Property valuation is a matter of judgment by an independent valuer and is therefore a matter of the valuer's opinion rather than fact.

The fund employs a single swinging pricing methodology to protect against the dilution impact of transaction costs. Due to the high transaction charges associated with the fund's assets, a change in the pricing basis will result in a significant movement in the fund's published price.

Key Risks

The fund can invest in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.

Dividend payment policies of REITs, in which the fund can invests, are not representative of the dividend payment policy of the fund.

A concentrated portfolio may be more volatile and less liquid than a more broadly diversified one. The fund's investments are concentrated in a particular region, country or sector.

How ESG is integrated into the investment strategy of the fund

The Fund is classified as Article 6 under the EU's Sustainable Finance Disclosure Regulation ("SFDR"). Article 6 funds don't promote ESG characteristics or have a specific sustainable investment objective. This fund is managed using an investment process that integrates environmental, social and governance ("ESG") factors but does not promote ESG characteristics or have specific sustainable investment objectives. This means that whilst ESG factors and risks are considered, they may or may not impact portfolio construction.

Furthermore, investments within this Fund do not take into account the EU Taxonomy criteria for environmentally sustainable economic activities.

abrdn, the Investment Manager of the fund, integrates sustainability risks and opportunities into its research, analysis and investment decision-making process. abrdn believes that the consideration of sustainability risks and opportunities of a company can have a material impact on a company's competitive position and future success and as such on long-term investment returns for investors. abrdn's ESG integration requires, in addition to its inclusion in the investment decision making process, appropriate monitoring of sustainability considerations in risk management, portfolio monitoring, engagement and stewardship activities. abrdn also engages with policymakers on ESG and stewardship matters. Combining the integration of sustainability risks and opportunities with broader monitoring and engagement activities may affect the value of investments and therefore returns. Further information on abrdn's ESG integration approaches by asset classes can be found at <https://www.abrdn.com/europe/sustainable-investing> under "Sustainable Investing".

Important information: Applying ESG and sustainability criteria in the investment process may result in the exclusion of securities in which the Fund might otherwise invest. Such securities could be part of the benchmark against which the Fund is managed, or be within the universe of potential investments. This may have a positive or negative impact on performance and may mean that the Fund's performance profile differs to that of funds which are managed against the same benchmark or invest in a similar universe of potential investments but without applying ESG or sustainability criteria. Furthermore, the lack of common or harmonised definitions and labels regarding ESG and sustainability criteria may result in different approaches by managers when integrating ESG and sustainability criteria into investment decisions. This means that it may be difficult to compare funds with ostensibly similar objectives and that these funds will employ different security selection and exclusion criteria. Consequently, the performance profile of otherwise similar funds may deviate more substantially than might otherwise be expected. Additionally, in the absence of common or harmonised definitions and labels, a degree of subjectivity is required and this will mean that a fund may invest in a security that another manager or an investor would not.
