Note: The non euro fixed interest holdings of the fund are hedged back to Euro to reduce currency risk.

Equity regional breakdown (as at 31 March 2026)

Source: Standard Life, March 2026. May not add up to 100% due to rounding.

Growth of €100,000 over 10 years

Value on 30 April 2016	Value on 30 April 2026
€100,000	€279,972

Source: FE fundinfo May 2026. Performance is net of charges (TER). Total Expense Ratio is the annual management charge plus additional expenses and is net of portfolio transaction costs. The actual return on a policy will be lower due to the total expense ratio, product charges (including adviser commission), and relevant taxes. Income received from the fund is reinvested and reflected in its performance.

The Standard Life Global Index Fund 100 launched on 17 August 2021. In order to show the historic performance of a similar portfolio prior to 17 August 2021, we use the past performance of the two underlying funds in which Global Index Fund 100 invests. The historic portfolio is comprised of the underlying Vanguard Global Stock Index Institutional EUR (ISIN IE00B03HD191) and the Vanguard Emerging Markets Stock Index Institutional EUR (ISIN IE0031786696). This performance track history assumes a fixed allocation of 100% Global Equities. The portfolio's past performance's is reflective of asset allocation rebalancing on a monthly basis. Please note that the Standard Life Global Index Fund 100 is rebalanced on an ongoing basis. The annual management charge (AMC) of these underlying funds is different to the AMC of the Standard Life Global Index Fund 100.

Quarterly market review

2026 started with rising geopolitical tensions, shifting trade policy and growing unease about AI's impact on businesses. Global economic activity remained weak as uncertainty weighed on growth. Inflation continued to ease in the UK and the US, although the inflationary effects of the Middle East conflict had yet to appear in official data during the period. Consequently, central banks adopted a cautious tone, with the European Central Bank (ECB), the Bank of England (BoE) and the US Federal Reserve (Fed) all signaling a wait-and-see approach at their March meetings.

In the Euro area, economic growth slowed to 0.2% in Q4, slightly below expectations of 0.3%. Meanwhile, euro area inflation picked up to 2.5% in March, driven mainly by higher energy prices, while underlying pressures eased, with core inflation dropping to 2.3%. The ECB left rates unchanged at 2.0% and signalled caution on future cuts.

US growth slowed sharply to 0.2% in Q4, which was down from 1.1% in Q3, as the government shutdown hurt economic activity. February's unemployment held steady at 4.4% in February, while US inflation, as measured by the core PCE Price Index, rose slightly to 3.1% in January, reflecting persistent price pressures. The Fed kept rates unchanged in March as it balanced slowing growth against stubborn inflation.
